At a glance

100%
Trades escrow-protected

Encrypted
Data at rest & in transit

KYC
Verified accounts only

1. Escrow protection

Funds for every exchange and P2P trade are held in escrow and released only when delivery is confirmed. Neither side can walk away with both the money and the asset - which removes the main risk in peer-to-peer trading.

2. Data protection

- ✓ Personal and identity data is encrypted in transit and at rest.
- ✓ Access is restricted on a least-privilege basis.
- ✓ Data is used only for verification and service delivery - never sold.

3. Account security

- ✓ One-time identity verification (KYC) before trading.
- ✓ Strong-password enforcement at sign-up.
- ✓ Session protection and CSRF safeguards on sensitive actions.

4. Platform & operations

- ✓ HTTPS everywhere with modern TLS.
- ✓ Transaction monitoring and fair dispute arbitration.
- ✓ A documented incident-response process.

5. What you can do

Use a strong, unique password and keep it private.
Only trade and pay inside the platform.
Never share verification codes, and never release escrow before you receive funds.
Report anything suspicious to support@transcurrex.com.
